LIMITLESS COLOR OPPORTUNITIES

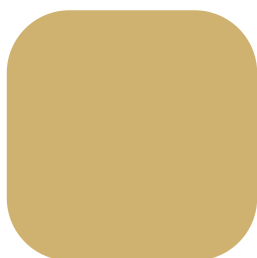

Color at WestWood is engineered for performance. Our proprietary 488 pigment system enhances PMMA surfacing systems, delivering vibrant, durable finishes for pedestrian and vehicular environments.

Integrated into systems such as WeTraffic and other high-performance WestWood surfacing assemblies, the 488 pigment platform delivers rapid cure times, long-term UV stability, and consistent color integrity under demanding exterior exposure. Designed for balconies, terraces, walkways, plaza decks, and parking structures, it supports both functional safety requirements and architectural design intent.

Standard offerings include 15 UV-stable colors formulated to resist fading under harsh sunlight. For projects requiring custom branding or precise architectural coordination, nearly unlimited options are available through the RAL color matching system (minimum quantities and extended lead times apply).

From subtle neutrals to bold traffic markings and safety zones, the WestWood Color System delivers durability, flexibility, and visual impact where performance matters most.

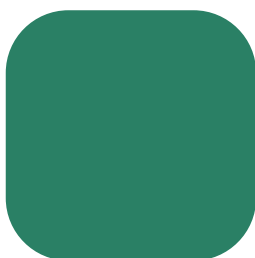

To request color samples or learn more, please contact your WestWood representative.
