INNOVATIVE AESTHETIC OPPORTUNITES WITH PMMA PERFORMANCE

WestWood® tile-effect applications deliver the visual structure of tile or plank layouts without the complexity, weight, or long-term risk associated with traditional tile installations. The design pattern is integrated directly into a seamless, liquid-applied, rapid-curing PMMA surfacing system, resulting in a durable, waterproof, and trafficable surface engineered for exterior exposure and pedestrian use. A limitless range of layout configurations, joint patterns, colors, textures, and finishes allows design intent to be expressed without compromising performance, making tile-effect PMMA well suited for both functional and architectural exterior spaces.

RAPID CURE, MINIMAL DOWNTIME - Typical cure in under one hour, allowing faster project turnover.

DESIGN FLEXIBILITY WITHOUT ADDED ASSEMBLY RISK - Tile and plank patterns are created as part of the PMMA application, not installed over it.

INTEGRATED SLIP RESISTANCE - Broadcast aggregates and textures tailored to pedestrian use.

CONSISTENT THICKNESS AND DETAILING - Uniform protection across field, transitions, and flashings.

SEAMLESS WATERPROOFING - No grout lines, no mechanical joints, no moisture pathways.
