PARKING FACILITY SOLUTIONS -

Built on rapid-curing PMMA technology, **WeTraffic®** by WestWood provides a seamless, skid-resistant surface that withstands heavy traffic, de-icing salts, and automotive fluids. With long-term durability and reduced maintenance needs, our systems extend the life of parking structures while keeping operations safe, efficient, and convenient for everyone who relies on them.

RAPID CURING - Surfaces are rainproof in minutes and ready for traffic in hours, minimizing downtime and keeping parking areas operational.

SEAMLESS & MONOLITHIC - Eliminates joints and vulnerable seams, reducing water ingress and long-term maintenance concerns.

TRAFFIC DURABILITY - Engineered PMMA formulation withstands constant vehicular loads, wheel turns, and braking stresses common in parking environments.

CHEMICAL RESISTANCE - Resists de-icing salts, fuels, oils, and UV exposure, ensuring long-term performance even under harsh conditions.

COST EFFECTIVE - Faster return to service reduces revenue loss and tenant disruption, while long service life lowers repair and replacement costs.

WeTraffic

ENGINEERED FOR PARKING FACILITIES

SIMPLIFIED!

Every hour counts when a parking facility is shut down. Downtime means lost revenue, frustrated tenants, and disrupted routines. That's why WestWood focuses on **PAC-Time** - the total time from **Preparation** to **Application** to **Cure**. While prep is similar across different systems and technologies, WestWood's **WeTraffic** systems excel where it matters most: fast application and rapid cure - getting decks, ramps, and garages back in service in hours, not days.

What is...

PAC-TIME?

Preparation: Getting the surface ready - cleaning, repairing, and priming to ensure proper adhesion and performance.

Application: Installing the system, including mixing, spreading, and layering, as required.

Cure: The time it takes for the application to set and be returned to service.

PREPARATION

For concrete surfaces, all systems require the same preparation. The difference is in how quickly you can move on to the next step. WestWood's PMMA-based primers, crack treatments, and repair products cure rapidly, letting installers keep the project moving without delays.

APPLICATION

Most parking deck systems require multiple layers, with wasted time waiting for each to cure. Some even require loose aggregate to be broadcast and then cleaned up, adding more labor and mess. WestWood's WeTraffic PMMA systems are aggregate-infused and install in a single layer, streamlining the process and saving valuable time.

CURE

Other technologies can take up to 24 hours to cure per layer, with return-to-service times ranging from the next day to several days later. In contrast, WeTraffic applications are rainproof in just 30 minutes and drivable in two hours - dramatically reducing downtime, protecting revenue, and minimizing tenant disruption.

PREPARED SUBSTRATE

WestWood's **WeTraffic** systems deliver unmatched speed, reliability, and performance - reducing downtime, lowering labor costs, and keeping parking facilities running smoothly.

With faster installation and rapid return to service, **WeTraffic** helps owners protect revenue, enhance tenant satisfaction, and complete projects on schedule with confidence.

WestWood®

WestWood USA is committed to delivering high-quality, versatile, and durable PMMA liquid-applied solutions that provide seamless and effective protection across a wide range of applications. Our innovative systems are designed for long-term reliability and superior performance, ensuring lasting protection, efficiency, and exceptional value in every application.
